### **SECUR BOPC AND BOS SOFTWARE UPGRADE – POST VIRGO FINE TUNING**

As Participants are aware the SECUR Virgo release was installed on the 2/3 November and is now operational. However in the week following the upgrade, Participants were advised of an issue regarding the operation of the Account Position window with this release. The issue is outlined below:

The BOPC is only auto updating the Account Position window when the update to a specific series/participant account is unique. Where the position movement involves an account that is already displaying a position in the Account Position window then the screen will not auto update. Participants were advised to reselect the 'search' button each time they wish to view accurate data within the Account Position Screen.

This issue has now been corrected and a fully backward compatible software release will be installed by SFE commencing Thursday 28 November 2002, SFE will contact Participants to arrange an agreed time and date. This release will also contain a fix to an unrelated issue whereby a BOS does not re-synchronise the Holding Give-up data after an intra-day BOS disconnection from the Remote Network Gateway.

Should you have any queries please contact the undersigned on 9256-0152 or [pstonham@sfe.com.au](mailto:pstonham@sfe.com.au)

A handwritten signature in black ink, appearing to read 'Paul Stonham', with a long horizontal flourish extending to the right.
