The 3 indicative prices are calculated using the arithmetic mean of the quotations provided at the following times: 9.45am, 10.30am and 11.15am.

The quotations used in the calculation of the arithmetic mean exclude the top and bottom two quotations of each quote period for each of the underlying Bonds.

The arithmetic mean of the provided yields truncates at 4 decimal places and then rounds to the nearest 0.005 for both the Three Year Commonwealth Treasury Bond Futures Contract and the Ten Year Commonwealth Treasury Bond Futures Contract.

The indicative futures price is then calculated by subtracting the rounded value from 100.

The [Final Settlement price](#) is calculated using the average of the truncated yield over the 3 quotation periods.
