

**Austraclear Notice No. 084/10**

Date of Issue: 9 June 2010  
Effective Date: 19 June 2010

---

**ASX AUSTRACLEAR SYSTEM UPDATES**

Participants are advised that Austraclear will provide an upgrade to the Common Gateway / Host to Host Lite Client (version 1-11) for use in the Exigo Production environment from Saturday 19 June 2010.

The new version of the Common Gateway client will be available from:  
[http://www.asx.com.au/professionals/austraclear/technical\\_documents.htm](http://www.asx.com.au/professionals/austraclear/technical_documents.htm)

There is no immediate impact on Participants who choose to continue to use the current version 1-7. However to assist with support and to maintain version consistency Participants are required to install the new client by Saturday 3 July 2010.

Participants should note that it is not possible to install the new version of the software prior to 19 June 2010 for the following reasons:

- The version will not synchronise with the Production Exigo environment until Saturday 19 June 2010; and
- Currently, the multiple versions of client software can't be installed on the same PC for access to the same Exigo environment.

Please note that it is not possible to login to the new version of the Common Gateway / Host to Host Lite Client on Saturday 19 June 2010.

**EXIGO GUI/ SWIFT**

These changes apply to Common Gateway / Host to Host Lite Client access and the GUI that were published in [SFE Notice 81/10](#). There is no impact to SWIFT access.

**Support**

If you have any queries in relation to the technical aspects regarding this Notice, please contact the Austraclear Service Desk on 1300 362 257.
